

Mentor Near Me

Description

- App mobile to find the right mentor near you to help you with your homework, labs, assignments or exams.

Explanation

- One student can create a help request in the app to help him to do the homework, one Lab or study for one exam, then the Mentor can check in the app the help requests and match with the student to do a meeting to achieve the request.
- The main idea is to help students to solve problems together with the mentor with the intention that students learn how the problem will be solved and don't just request to do the homework without learning something.
- We are planning to use the API from Google Maps to create the request and use JSON or a .txt file to save the information until we have access to one database.

Repository

- <https://github.com/HermiloOrtega/SwiftCode/tree/master/Final%20Project>

API

- Google Maps

Team

- Agamenon
- Carlos Camacho
- Hermilo Ortega

Technologies used

- Xcode
- Visual Studio Code
- Adobe XD (Option 1)
- Animockup (Option 2)
- GitHub
- GitHub Kanban

Languages

- Swift
- JSON
